## Inglett® 3560 "Bag Pro™" Bag Handling System

The only hanging, filling and closing system versatile enough to run paper, poly and woven poly bags without additional change-over time.

### FEATURES:

From the moment you bring the 3560 Bag Pro into your plant you'll appreciate its fast, simple installation and start up process. Then when you need to make a bag type or size change, you'll find that the 3560 is the quickest and easiest in the industry, thanks to its (optional) advanced touch screen controls and motorized adjustments.

### VERSATILITY:

With appropriate options the 3560 will perform well in dusty, wet or corrosive environments. The 3560 will run products from English walnuts to table salt at a very attractive entry level price.

### PERFORMANCE:

The 3560 Bag Pro will reform and close paper, poly, woven poly bags, at up to 16 BPM. The optional high-speed servo control allows for the speed that is necessary for this kind of performance. 3560s maintain perfect control of the filled bag while it slows down to match the in-feed speed of the standard sealer. This gentle sealing speed allows for a shorter sealer and will also cut its maintenance requirements dramatically.

# INGLETT®

Bag Weighing & Handling
